

COMICCRAFT – AI COMIC STORY CREATOR USING GEMINI MODELS

PHASE 1: BRAINSTORMING & IDEATION

1. PROJECT IDEA

ComicCraft is an AI-powered sequential art assistant that generates personalized comic book stories and illustrations based on user-provided prompts using Google Gemini models and Stable Diffusion image pipelines.

2. PROBLEM IDENTIFICATION

Traditional comic book creation is a highly expensive and long process that requires specialized human resources, including creative scriptwriters, page layout designers, pencilers, and letterers. Many creative writers have great story concepts but lack the elite visual artistic illustration skills needed to draw sequential panel backgrounds.

3. PROPOSED SOLUTION

ComicCraft collects basic visual story details from the user via a simple web interface and chains multi-modal language agents with high-speed image generation pipelines to automatically generate a panel-by-panel comic strip, complete with text narration, character dialogues, and printable vector PDF output documents.

4. TARGET USERS

- 1.Independent writers and authors
- 2.Creative students
- 3.Comic book hobbyists and enthusiasts
- 4.Non-artists wanting to visualize stories
- 5.Casual digital content creators

5. MAIN FEATURES

- 1.User story prompt parameter capture
- 2.Character, setting, tone, and art style selection
- 3.AI-generated structured 5-panel comic outline
- 4.Context-aware character dialogues and script narration
- 5.Multi-panel vivid graphic artwork illustrations
- 6.Interlinked sequential web dashboard preview page
- 7.Print-ready vector PDF document compilation export engine

6. TECHNOLOGY IDEA

1. Frontend: HTML, CSS, Jinja2 Templates
2. AI Engine: Google Gemini Flash (Outline Parser) & Gemini Pro (Script Engine)
3. Image Engine: Stable Diffusion (Hugging Face Diffusers / Pollinations Pipeline)
4. Backend Framework: FastAPI Core with Uvicorn ASGI Server
5. Export Engine: FPDF Vector Document Compiler Framework

7. EXPECTED BENEFITS

Saves substantial time and financial costs in sequential page production
Democratizes visual storytelling for non-artists and indie writers
Eliminates pipeline fragmentation by combining text and image synthesis into one system lifecycle
Delivers print-ready vector comic documents onto local disks instantly

8. PROJECT GOAL
To develop an easy-to-use web application that empowers users to automatically transform abstract text ideas into complete, visually immersive multi-panel comic books using Google Gemini models and dynamic diffusion art farms.

Simple Mind Map

VISUAL PANELS	DIALOGUE SCRIPTS
(512x512 JPEG Artwork)	(Narration & PDF Print)
Use code with caution.
